CURRICULUM VITAE

Meagan Swenson

Full-stack developer

Amsterdam, Netherlands swens2005@yahoo.com +31 6 27 35 58 91
linkedin.com/in/meagan-swenson codelaunch.nl

Profile

Full-stack developer with 25+ years of experience building websites and web applications, from the user interface to the database. Seven of those years were at Philips and Albert Heijn in the Netherlands. Main stack: Oracle/PL-SQL, PHP/Laravel, React, HTML/CSS/JavaScript. Since 2026 I have been working with AI-assisted and agentic development using Claude Code and GitHub Copilot.

Highlights

- **Philips and Albert Heijn (2019 – present):** seven years building and maintaining production web and back-end systems for two major Dutch organizations
- **Agentic development pipeline on Claude Code:** built agents that turn user stories into working code and review that code before merge; authored custom Claude skills to reuse development workflows
- **Philips global website rebuild:** redesigned and rebuilt the global Marketing & E-Commerce website in 6 months; site traffic increased by 50%
- **GDPR anonymization at Albert Heijn:** built an automated customer-data anonymization process in Oracle/PL-SQL that replaced hundreds of manual requests per month

Work experience

Full-Stack Developer (Independent Contractor)

AI-Assisted Development | 2026 – Present

- Building full websites from the ground up using AI-assisted development, with Claude Code and GitHub Copilot as primary tools
- Developing with PHP, Laravel, React, and SQL, using AI assistance to work across Node/npm, Vite, Composer, and Livewire/Inertia
- Setting up CI/CD through GitHub deployments to VPS and cPanel-hosted environments
- Integrating AI tooling into the workflow improved project organization and delivery speed

Key projects

- **Agentic Development Pipeline:** Built on Claude Code: user stories scoped specifically for AI-agent execution, an agent that consumes those stories to generate working code, and a second agent that reviews the generated code before merge.
- **Custom Claude Skills:** Authored custom Claude skills that package repeatable development workflows and standards for reuse across projects.
- **Mission Control (codelaunch.nl/mission-control):** Laravel and React app that runs a small web studio from proposal to launch, with a client portal and an autopilot demo; 760+ automated tests, browser tests in CI and a production smoke test after every deploy.

Back-End DevOps Engineer & Technical Product Owner

Albert Heijn (Ahold Delhaize) | September 2023 – Present | Technical Product Owner scope since 2025

- Developing and maintaining back-end services and PL/SQL applications within Oracle databases supporting the Order Management System (OMS) for Albert Heijn Online

- Delivered multiple stories end to end through the full SDLC: analysis, PL/SQL development, unit tests, and pull-request review
- Built an automated PL/SQL regulatory reporting job (ANAF, Romania) for monthly cash-payment customer data extraction, encrypted SFTP delivery from the Unix server, and Control-M scheduling, delivered end to end
- Designed and built a new Oracle Forms menu for country-specific customer anonymization, working through role-based access constraints on legacy roles
- Root-caused and remediated recurring production incidents in BOFF/PL-SQL, including a merge-sequencing timing defect and 12 correlated messaging errors traced to specific order IDs
- Reviewed PL/SQL code and provided implementation feedback to peers, catching a cursor-placement compilation defect before release
- Deployed a defensive-programming hotfix (targeted exception handling) that eliminated a recurring class of overnight incidents caused by non-finalized order auto-cancellation
- Migrated legacy integration contracts to a new messaging platform, authoring the technical migration hub and reusable contract-documentation templates
- Documented and maintained 35+ BOFF/FOFF/ECDT integration contracts, including event handlers, PL/SQL packages, entity mappings, and testing risk assessments, creating a searchable catalog of the OMS integration surface
- Extended a data-lake PII-tagged dataset with a new employee identifier field, authoring the user story, coordinating PII-tag creation, and running verification SQL across five stakeholder teams
- Performed final UTF-8 conversion verification testing across multiple production screens and reports ahead of sign-off
- Configured and tested threshold-based security alerting rules for the OMS platform, partnering with the security engineering team on scope and validation
- Investigated and resolved Control-M job scheduling issues: tuned retry logic on one job and restored another that had been unintentionally held since an unrelated infrastructure migration
- Used GitHub Copilot to generate SLI metric recommendations across OMS batch jobs, mapping each job to success-rate, execution-time, and row-count metrics

Key projects

- **ANAF Regulatory Reporting (Romania):** Designed, built, and scheduled a fully automated PL/SQL job to meet a legal monthly reporting obligation, delivered end to end from analysis to production.
- **GDPR Data Anonymization:** Built a self-sustainable anonymization process for a back-end order-tracking database, verifying customers via a single data element and eliminating hundreds of manual requests per month.
- **SLI/SLO Framework:** Defined service-level indicators for critical batch jobs, using AI tooling to help scope the initial metric set.

Technical Lead: Hybrid Full-Stack Developer & Senior Business Analyst

Philips (Koninklijke Philips N.V.) | February 2019 – August 2023 | 4.5 years

- Built and maintained the internal Philips Global Marketing & E-Commerce website
- Maintained 10+ additional custom website builds and SharePoint sites
- Designed functional user interfaces and website elements from brand guidelines
- Developed user experience flows based on stakeholder requirements
- Created websites using HTML, CSS, and JavaScript arrays for data management
- Proposed technical implementation strategies for the right business technologies
- Performed data analysis using SQL and Excel to support data-driven decisions
- Completed testing and release planning between environments

Key projects

- **Global Website Revamp:** Inherited a disorganized, outdated global marketing site. Engaged stakeholders to define requirements and a full redesign plan, relaunching within 6 months to a 50% increase in site traffic.
- **Custom Web App:** Built a fully interactive web application covering all marketing and e-commerce business processes, with complex data structures for ongoing flexibility, rolled out within 30 days.

Owner, Project Manager & Developer

Adroidea Web Design Studio | 2009 – 2022 | 13 years

- Ran a web design and development studio with a developer on my team, building websites and the applications behind them for about 150 clients
- Gathered and documented client requirements, designed the UI and UX in Photoshop, and managed each project from planning to launch and maintenance
- Built ordering platforms, client portals, a video marketplace, instant-estimate tools and an in-house content management system used across our later sites

Key projects

- **Wisconsin Ignition Interlock Device:** Moved client sign-up, agreements, installation and payments online in one system for clients and staff: 105 work orders and about 1,700 hours over five years.
- **Dealer Ordering Platform:** Designed and built a dealer store for a parts distributor, then reused the platform for two more brands with their own designs and catalogs.

Technical Lead, Senior Business Analyst & Web Application Developer

Hewlett-Packard (acquired EDS in 2006) | November 2002 – September 2018 | 16 years

- Built 20+ web applications, including a communication log and issue tracker
- Built hundreds of specialized, interactive data reports using SQL, PHP, and HTML
- Designed streamlined user interfaces with Photoshop
- Completed testing and release planning for web applications
- Maintained document repository and back-end data-entry web applications
- Produced documentation requests for database asset creation in Oracle

Key projects

- **Wisconsin Medicaid Time-Tracking System:** Built a complete time-tracking and invoicing system from the ground up using PL/SQL, ASP, Active Directory, and Ajax, with reporting accurate down to $0.01.
- **Document Repository Overhaul:** Rolled out an extensive update covering hundreds of reports for the State of Wisconsin Medicaid program, improving efficiency and data access.

Skills

Core skills

Full-Stack Web Development (Front-End to Database) | AI-Assisted & Agentic Development Workflows | Root-Cause Analysis & Problem-Solving | Database Design, Integration & Query Optimization | API Integration & System-to-System Messaging | Requirements Translation (Business Need to Technical Spec) | Unit Testing, Code Review & Pull-Request Review | Testing, Release Planning & Environment Promotion | Documentation & Technical Knowledge Capture | Team Collaboration & Cross-Functional Communication

Languages & Front-End: HTML, CSS, JavaScript, jQuery, Bootstrap, PHP, Laravel, React, ASP, JSP, Java, Ajax, REST APIs

Database & Back-End: Oracle, PL/SQL, MySQL, MSSQL, Oracle Forms, SQL Developer

AI-Assisted Development: Claude Code, GitHub Copilot, agentic workflows (story-to-code agents and automated code review), custom Claude skills, user stories designed for AI-agent execution, Node/npm, Vite, Composer, Livewire/Inertia

DevOps, Hosting & Release: Git, GitHub (pull requests, code review), CI/CD via GitHub deployments, VPS and cPanel hosting, Unix/Linux, WinSCP, PuTTY, SFTP, file encryption for secure data delivery, Control-M, Opsgenie, PagerDuty, ServiceNow, Power Automate, Active Directory, VS Code

Platforms & Design Tools: Shopify, Magento, WordPress, Webflow, Dreamweaver, Photoshop, Confluence, Jira, draw.io

Microsoft Tools: Excel, Access, Outlook, PowerPoint, SharePoint, Visio, Word

Education

- **Computer Information Systems, AS** – Herzing University | 2000 – 2002
- **Teaching & General Sciences** – University of Wisconsin | 1998 – 1999
- **General Sciences, High Honors** – Madison Memorial | 1994 – 1998

Certifications

- Project Management Professional (PMP) – PMI, currently pursuing
- EITCA Web Development Programme – EITCI, May 2023
- A+ Certification – CompTIA, January 2001

Languages

- **English** – Native
- **Dutch** – Intermediate
- **Spanish** – Intermediate
